opinion upon this point. On one side it is asserted that the internal organs of the abdomen are so delicate and so easily displaced or deranged, that it is conducive to weakness and disease to carry any weights hanging upon that portion of the body. It is replied to this that women's shoulders are not this that women's shoulders are not

portion of the body. It is replied to this that women's shoulders are not strong enough and suitably shaped to carry sogreat a weight as Besign puts and that the fedica with-indicated the institute of the suitable of the carry sogreat a weight as Besign puts and that the fedica with-indicated the institute of the suitable of the carry sogreat a weight as Besign puts and that the fedica with-indicated the institute of the suitable of the carry sogreat a weight as Besign puts and that the fedica with-indicated the puts the suitable of the carry sogreat a weight as Besign puts and the suitable of the suitable of the carry sogreat a weight as Besign puts and the suitable of the sui

suspenders can ever meet with much favor among women, certainly not with women of well-developed busts. I would not put them or anything that would press over the bust upon a growing girl, for fear of hindering a fine development of the form. I do not know of anything better than a well-made underwaist for women and for children. It is cleanly and comfortable (fitting the figure loosely, of course,) and makes a good support for the skirts, either by means of buttons or by means of a gord or circling piece about two inches or less in depth, with a long whalebone or rattan run in the hem. This is set on around the bot-This is set on around the bottom of the waist, and skirts buttoned around the waist hang upon it and

wardrobe, but everybody knows that day, and the bringing it to the boiling it is frequently the case, and less simpoint just before serving. pose are openly exposed for saie. The waist proposed here, such as many have worn for years, suits some of us better when made over the shoulders like a Garabaldi or Spencer waist, but gathered into a belt five or six inches

wide, with gores (or derts or blases) to fit the figure. This seems in give more freedom to the arms, and give a good "set" to the loose dress-waist worn over it. —[American Agriculturist.

Larm and Lousehold. Lime vs. Ashes.

Place a piece of iron or steel in damp ashes, and it will soon corrode with rust. Place the iron or steel in lime mortar, and it will remain bright and the rust will disappear. Sow small grain where a bresh pile or log heap has been burned, or where a liberal dressing of ashes has been applied, and there will be a rank growth that will probably fall and never mature. Sow the grain where lime has been applied to the soil, and the grain will grow to the soil, and the grain will grow with stout, stiff straw, and plump, haroy head that mature well. Ashes cause a rank growth of the herbaceous part of plants, such as leaves straw and grass; lime induces the growth of the woody part of plants, and the grain or fruit. Ashes stimulate heavy muck, and rich or virgin soils. the grown. And the grain or fruit. Asnes seems the average in the soil. They appear to disintegrate or make available what is already in the soil. They seem to act specially on vegetable mould and manures from the barnyard. Apply them to the most offensive pile of compost, and they will render it inodorous and worthless as a fertilizer, their effect being that of refertilizer, their effect being that of refertilizer. caying vegetable metter would be wasted—worse then wasted—as they wasted—worse then wasted—as they render the compost inert as a fertilizer. Applied to an offensive sink, sewer or cesspool, they serve an excellent purpose as a disinfectant. They promote the growth of grass forage especially, proving very valuable on low lands; will stimulate trees, etc., to a wiggrous growth when the soil is ing. They exhaust strong soils and

strong. They exhaust strong soils and it jute poor ones.

Lime improves poor soils, especially study ones, by rendering them more compact and capable of retaining fertility when applied. As a promote of health and vigor in apple trees, it is one of the best applications that can be made to the soil. Under its influence trees mature well, the fruit is iner, and the are freer from disease.

Lime improves poor soils, especially is without a rivai in the world for carling or preventing roughness and chapping of either hands or face.

How to Keep Winter Apples, The following excellent suggestions re offered by the Vermont Farmer: the way that most farmers save their inter apples is to hole them up, like otatoes, or pile them up in a cave or lar. By this method you not only much valuable time, but lose very ny apples; and what you do keep er winter are in bad condition. Apaite open; but the best and cheapest ay is to keep them in crates or boxes ay is to keep them in crates or boxes and in the following manner: The ds of headpieces should be ten or yelve inches wide by fifteen or ghteen long. They can be sawed split. Nail your boards on the bot mand sides, leaving places for ventition. Have your boards all the same igth—about three feet.

When you gather your apples from a trees, put them in these boxes (be reful not to bruise them) and lay

Pretty Plain Talk.—But no Plain the boxes on each other in your apple house. Two men will handle these boxes with ease. You can look your

How to Cook Corned Beef .- The around the waist hang upon it and make no pressure upon the hips. A piece of the cloth of the underwaist, sewed on when the bust ought to be either full like a scent puff or set on plain like a pocket, open at the top, serves as a receptacle for any material which women defrauded by nature of a good womanly form are tempted to carry. The best filling for these pockets is probably white curled hair or moss. It is a great pity that any woman should need such additions to her wardrobe but approach to the program in the liquor until cold. Tough in short, I think the ARLINGTON mas no instance of the program in the liquor until the next and the next and the pringing it to the boiling.

How to Cook Corned Beef.—The Boston Journal of Chemistry says:

"The rule has a Hibernian sound. Don't boil it, for comed beef should never be boiled. It should only simmer, being placed in a part of the many or a part of the pange or stove where this process may go on uninterruptedly from four to six hours, according to the size of the piece.

If it is to be served cold, let the meat remain in the liquor until cold. Tough in short, I think the ARLINGTON mas no equal for baking or for any other purpose.
